**Topic 1:
Communication Models: Definition,
Scope & Purpose**

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.2

What is a Model?

- ❖ A model is a presentation of the real phenomenon in abstract terms that can be applied in different forms at different times.
- ❖ "In the broadest sense, a model is a systematic representation of an object or event in idealized and abstract form. Models are somewhat arbitrary by their nature.
- ❖ The word 'model' refers as representation of a process, and event or a situation. It is not a separate or independent method rather it is the representation of an existing object. The communication model is similarly a symbolic representation of the communication process.
- ❖ A model is widely used to depict any idea, thought or a concept in a more simpler way through diagrams, pictorial representations etc.
- ❖ Models go a long way in making the understanding of any concept easy and clear.
- ❖ Through a model one can easily understand a process and draw conclusions from it. In simpler words a model makes the learning simple.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.3

Communication Model Defined

➤ The communication model is similarly a symbolic representation of the communication process. It does not show the details of a message rather it presents only those elements which are related to the object of sending a message.

Communication model can be verbal, arithmetical, graphical or pictorial.

- ❑ W.R. Tracey in his 'Designing, Training and Development Systems' quoted as "Communication model is a representation of a process and not any separate system rather a simple may to present the various oriented elements."
- ❑ "Communication models are merely pictures; they're even distorting pictures, because they stop or freeze an essentially dynamic interactive or transitive process into a static picture."
- ❑ "Models are metaphors. They allow us to see one thing in terms of another."
- ❑ Mortensen: "In the broadest sense, a model is a systematic representation of an object or event in idealized and abstract form. Models are somewhat arbitrary by their nature. The act of abstracting eliminates certain details to focus on essential factors. The key to the usefulness of a model is the degree to which it conforms--in point-by-point correspondence--to the underlying determinants of communicative behaviour."

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.4

Scope & Purpose of Communication Model

A model is a miniature, a highly selective visual representation of any reality. In that sense, communication model means graphical/visual representation of communication process using various elements involved.

Purpose of Communication Models

A graphic representation of any reality helps us visualize the relationships among various elements of a structure, system or process; an object, event or act.

Mc Quail and Windhal say that a model is a consciously simplified description in graphic form of a piece of reality. No single model can be expected to present a holistic picture of reality. Communication models help us to visualise, analyse and discuss various complex processes and issues that would be otherwise difficult to explain.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.5

Scope

- Communication models help us to know about various aspects of communication. Therefore the scope of communication model can be described as-

Determination of Effectiveness of Communication:

Representation of Methods

Use as a Sample:

The measure of Inflexibility

Representation of Objective:

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.6

Scope (contd.)

- **Determination of Effectiveness of Communication:** In the communication process, three things i.e., sender, message and receiver are significant. Essential elements of the communication process are represented through the communication model, and such a model helps us to measure the effectiveness of communication. Such a model helps in our decision making.
- **Representation of Methods:** Communication models are pictorial representation of communication process. So, elements & aspects related to communication process are brought into picture which provides complete idea.
- **Use as a Sample:** The communication model involves a pictorial representation of various elements of the communication process, which can be used as a sample for further research and investigation.
- **The measure of Inflexibility:** The communication model is rigid, but communication is ever-changing. The communication model can be an essential source to understand the nature of inflexibility.
- **Representation of Objective:** The communication model represents the objectives and related aspects of the message sent and create a meaningful picture.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.7

Importance of Communication Model

To learn Something	Research and Investigation	Forecasting
1. The communication model helps to learn about sending and receiving the message and other related elements of the communication process. As a result, both superiors and subordinates acquire knowledge and get interactive to make proper communication.	1. As the communication model represents various pictorial aspects, researchers find their means or sample for further investigation. As a result, innovation is possible.	1. Elements responsible for success or failure for communication can be foretasted through the communication model. Such a model assumes the types of communication to be adequate for a particular situation or location

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.8

Functions of Communication Model

- **Organizing function:** Models help us by ordering and relating systems to each other by providing with images of whole that might not otherwise perceived.
- **Explaining function:** Models help us study communication by providing simplified version which would otherwise be complex.
- Yet another function of communication is heuristic in nature. It means that in the study of communication, models guide researchers to the key points of the process or system.

Thus communication models help:

- a. to assign probabilities to formulate hypothesis in research
- b. to predict outcomes
- c. to describe the structure of a phenomenon

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.9

Functions of Communication Model (contd..)

❖ *Communication model helps us to know about various aspects of communication. And therefore the importance of communication model can be described as follows:*

- 1. Determination of Effectiveness of Communication:** In communication process, three things i.e. sender, message and receiver are significant. Essential elements of communication process are represented through communication model and such model helps us to measure the effectiveness of communication. Such model helps in our decision making.
- 2. Representation of Methods:** Communication models are pictorial representation of communication process. So, elements & aspects related to communication process are brought into picture which provides complete idea.
- 3. Use as a Sample:** Communication model involves pictorial representation of various elements of communication process which can be used as a sample for further research and investigation.
- 4. Measure of Inflexibility:** Communication model is rigid but communication is ever changing. To understand the nature of inflexibility, communication model can be an essential source.
- 5. Representation of Objective:** Communication model represents the objectives and its related aspects regarding the message sent and therefore creates a meaningful picture.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.10

Limitations of Communication Models

❖ *Communication model plays a vital role in understanding the communication process, although importance of communication model can't be denied and such models are useful in many ways, yet they suffer from some limitations which are as follows:*

- 1. Symbolic Representation:** A model is a symbolic representation of the communication process. Details are not available in a communication model. without details sound decision is hampered.
- 2. Inflexibility:** Communication is an ever-changing process. But communication models are given through symbols which are inflexible or rigid.
- 3. Only Relevant things are represented:** Less important elements or any supporting information are not shown in a communication model. So, it is very difficult to form a true idea about the message from a model.
- 4. Premature Ending:** Initiators of communication models think that their work is enough and includes all. But their thinking is wrong. Researchers lose their interest for further because of such thinking.
- 5. Cost-Benefit Aspect:** Preparation of any model requires a lot of money as well as valuable time. But the benefits may be less from the application of such model. Hence it is a problem.
- 6. Requirement of Skilled Manpower:** The development of communication model requires skilled manpower. Such manpower may not be available always.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.11

Basic Communication Models:

Aristotle's Classical Model; Shannon- Weaver's Mathematical Model; Wilbur Schramm's Model; Laswell's Model

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.12

Aristotle's Classical Model

- Aristotle(384-322 B.C) was a Greek philosopher and writer born in Greece.
- While exploring the human nature scientifically, Aristotle developed a linear model of communication for oral communication known as "Aristotle's Model of Communication".
- This is considered as the first model of communication and was proposed before 300 B.C. It is also the most widely accepted among all communication models.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.13

Aristotle's Classical Model (contd..)

```

graph LR
    Speaker[Speaker] --> Speech[Speech]
    Speech -- Occasion --> Audience[Audience]
    Audience --> Effect[Effect]
            
```

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.14

Aristotle's Classical Model (contd..)

- Aristotle Model is mainly focused on speaker and speech. It can be broadly divided into 5 primary elements: Speaker, Speech, Occasion, Audience and Effect.
- It is a speaker centric model as the speaker has the most important and active role in it. It is the speaker's role to deliver a speech to the audience.
- The role of the audience is passive, influenced by the speech. This makes the communication process one way, from speaker to receiver.
- The speaker must organize the speech beforehand, according to the target audience and situation (occasion). The speech must be prepared so that the audience be persuaded or influenced from the speech.
- He believed "**Rhetoric**" is the study of Persuasion and communication and different message or speech should be made for different audiences at different situations to get desired effects or to establish a propaganda.
- There is no concept of feedback.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.15

Elements of a Good Communicator

- **Ethos** is the characteristic which makes you credible in front of the audience.
 - If there is no credibility, the audience will not believe in you and will not be persuaded by you.
- **Pathos** refer to emotional bonds will make the audience captivated and they feel the speaker is one of their own people.
- **Logos** is logic. People find logic in everything. If there is no logic behind the speaker's work or time, they do not want to get involved.

➤ **Criticism**

- There is no concept of feedback, it is one way from speaker to audience.
- There is no concept of communication failure like noise and barriers.
- This model can only be used in public speaking.

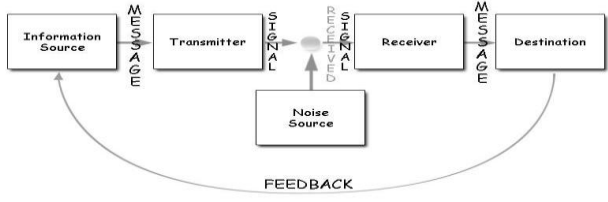

Shannon-Weaver's Mathematical Model of Communication

Shannon-Weaver's Model

- Shannon Weaver model of communication was created in 1948 when **Claude Elwood Shannon** wrote an article "A Mathematical Theory of Communication" with Warren Weaver.
- Shannon was an American **mathematician** whereas Weaver was a **scientist**.
- This model is more **technological** than other **linear** models.

Shannon-Weaver's Model (contd..)

- **Sender** (Information source) – Sender is the person who makes the message, chooses the channel and sends the message.
- **Encoder** (Transmitter) – Encoder is the sender who uses machine, which converts message into signals or binary data. It might also directly refer to the machine.
- **Channel** Channel is the medium used to send message.
- **Decoder** (Receiver) – Decoder is the machine used to convert signals or binary data into message or the receiver who translates the message from signals.
- **Receiver** (Destination) –Receiver is the person who gets the message or the place where the message must reach. The receiver provides feedback according to the message.
- **Noise** –Noise is the physical disturbances like environment, people, etc. which does not let the message get to the receiver as what is sent.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.19

Shannon-Weaver's Model (contd..)

- The **sender encodes** the message and sends it to the receiver through a technological channel like telephone and telegraph. The sender converts the message into codes understandable to the machine. The message is sent in codes through a medium.
- The **receiver** has to **decode** the message before understanding it and interpreting it. The receptor machine can also act as a decoder in some cases. The channel can have noise and the receiver might not have the capacity to decode which might cause problems in communication process.

Levels of Problem

- **Level A (Technical problem)**– How a channel causes a problem.
- **Level B (Semantic Problem)** – Is the meaning of message sent and received very different.
- **Level C (Effectiveness problem)** – How effectively does the message cause reaction.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.20

Advantages

- Concept of noise helps in making the communication effective by removing the noise or problem causing noise.
- This model takes communication as a two way process. It makes the model applicable in general communication.
- Communication is taken as quantifiable (able to be expressed or measured as a quantity) in Shannon Weaver model.

Criticism

- It can be applied more for interpersonal communication than group communication and mass communication.
- Receiver plays the passive part in the communication process as sender plays the primary role that sends messages.
- Feedback is taken as less important in comparison to the messages sent by the sender.
- The model is taken by some critics as a “misleading misrepresentation of the nature of human communication” as human communication is not mathematical in nature.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.21

Wilbur Schramm's Model of Communication

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.22

Wilbur Schramm's

❖ Wilbur L. Schramm is considered the forefather of the basic model of communication. His model is a derivation of the Shannon-Weaver's transmission model of communication. **The Shannon-Weaver model proposed six elements of communication:**
1. Source 2. Encoder 3. Message 4. Channel 5. Decoder 6. Receiver

❖ In 1954, Wilbur Schramm's model expands on this thinking by emphasizing the process of encoding and decoding the message. Schramm contemplated this process as a two-way circular communication between the sender and the receiver. Where the Shannon Weaver model is a more mathematical and technological one, Schramm incorporates the study of human behavior in the communication process.

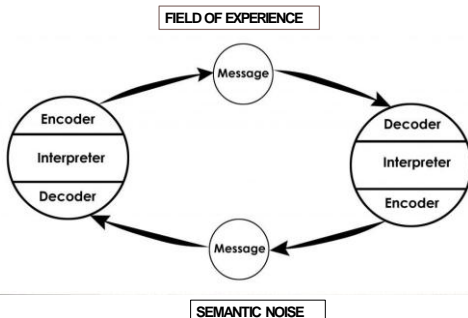

In addition to the six elements above, Schramm included the following concepts:

- ❑ **Feedback** - Information that is echoed back from the receiver to the sender and tells the sender how well the message has been communicated.
- ❑ **Field of Experience** - the imaginary area which is a part of the individual or a group containing individual's beliefs, values, experiences and meanings. A field of experience includes past life experiences as well as attitudes and beliefs. It affects how the processes of encoding, decoding, and interpretation take place

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.23

Wilbur Schramm's (contd..)

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.24

Wilbur Schramm's (contd..)

- Encoder– Who does encoding or sends the message (message originates).
- Decoder– Who receives the message.
- Interpreter– Person trying to understand (analyses, perceive) or interpret.

➤ Semantic noise is introduced here. It occurs when the sender and receiver apply different meanings to the same message. It happens mostly because of words and phrases.

➤ From the message starting to ending, there is an interpretation going on. Based on this interpretation only the message is received.

➤ This model breaks the sender and receiver model, it sees communication in a practical way. It is not a traditional model.

➤ It can happen within our self or two people; each person acts as both sender and receiver and hence use interpretation. It simultaneously takes place i.e. encoding, interpret and decoding.

➤ When semantic noise takes place decoding and interpretation becomes difficult and people get deviated from the actual message.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.25

Advantages

- ✓ Dynamic Model- Shows how a situation can change.
- ✓ There is no separate sender and receiver, sender and receiver is the same person.
- ✓ Assume communication to be circular in nature.
- ✓ Feedback is a central feature.
- ✓ Introduction of semantic noise.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.26

Laswell's Model of Communication

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.27

Laswell's Model

- Laswell's communication model was developed by communication theorist Harold D. Lasswell in 1948.
- Laswell's model of communication (also known as action model or linear model or one way model of communication) is regarded as one the most influential communication models.
- Laswell's communication model has 5 components which are used as an analysis tool for evaluating the communication process and components.
- The components are the questions to be asked to get the answers and keep communication going.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.28

Laswell's Model (contd..)

- The communication process of Lasswell, in the broader sense, spans to four basic and important questions. They are: Who? What? Which? Whom? What Effect?
- These are well defined behavioral aspects of the sender in communication process. Lasswell's model ignores the essential elements of the communication process.
- However, this model indicates the major elements in the process by posing some questions related to the act of communication.
- They are: Who? Says What? In Which Channel? To Whom? With What Effect?

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.29

Laswell's Model (contd..)

COMPONENTS OF LASSWELL'S MODEL

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.30

Laswell's Model (contd..)		
Component	Meaning	Analysis
Who	The communicator or sender or source of message	Control Analysis
Says what	The content of the message	Content Analysis
In which channel	the medium or media	Media Analysis
To whom	the receiver of the message or an audience	Audience Analysis
With what effect	the feedback of the receiver to the sender	Effect Analysis

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.31

Laswell's Model (contd..)		
<ul style="list-style-type: none"> ➤ Control analysis helps the sender to have all the power. ➤ Content analysis is associated to stereotyping and representation of different groups politically. It is also related to the purpose or the ulterior motives of the message. ➤ Media analysis represents which medium should be used to exercise maximum power against the receivers. ➤ Audience analysis shows who are the target population to be manipulated or brain-washed. ➤ Effect analysis is used to predict the effect of message over the target population to be exploited. 		

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.32

Laswell's Model (contd..)		
<ul style="list-style-type: none"> ➤ This model is about process of communication and its function in the society. According to Lasswell, there are three functions of communication: <ul style="list-style-type: none"> <input type="checkbox"/> Surveillance of the environment <input type="checkbox"/> Correlation of components of society <input type="checkbox"/> Cultural transmission between generation ➤ Lasswell's model suggests the message flows in a multi-cultural society with multiple audiences. The flow of message is through various Channels. This communication model is also similar to Aristotle's communication model. ➤ In this model, the communication component 'who' refers to the research area called "Control Analysis", 'Says what' refers to "Content Analysis", 'In which channel' refers to "Media Analysis", 'To whom' refers to "Audience Analysis" 'With What Effect' refers to "Effect Analysis" 		

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.33

Advantages

- Though Laswell's model was developed to analyze mass communication, this model is used for interpersonal communication or group communication to disseminate a message to various groups in different situations.
- Laswell's model was developed to study the media propaganda of countries and businesses. Only rich people used to have communication mediums such as televisions and radios back then. It was made to show the mass media culture.

Criticism

- It does not include feedback and it ignores the possibility of noise. Without feedback, a communication process can not be fruitful.
- Laswell's model is very linear and does not consider barriers in the communication process.
- Also criticized for being very general and only including very traditional topics. The model is very simplistic.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.34

Advanced Communication Models:

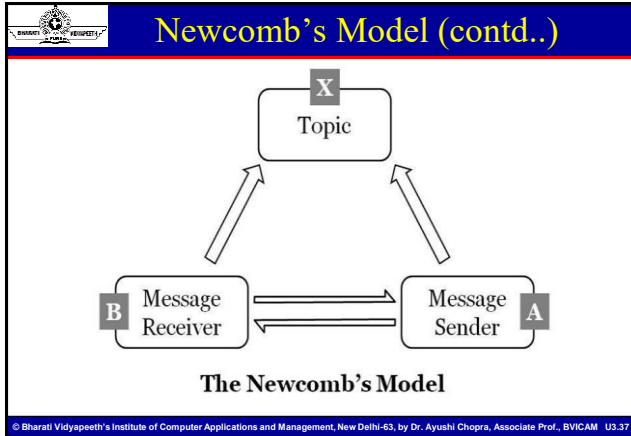

Newcomb's Model; Westley-Mclean's Model; George Gerbner's Model; Mc-combs and Shaw's Agenda Setting Model; Spiral of Silence Model

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.35

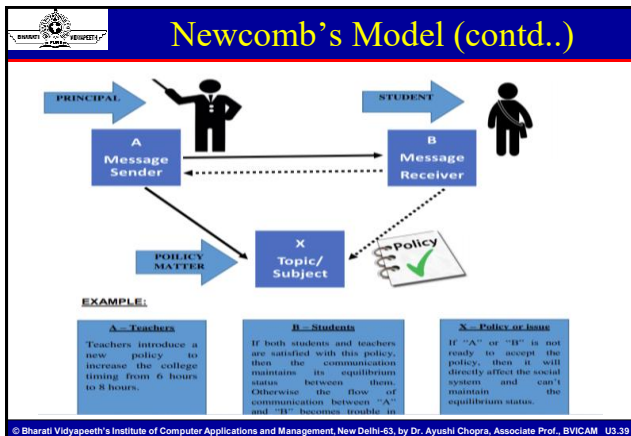

Newcomb's Model

- Newcomb published a new social approach in the field of communication which is called "ABX" system (later it became Newcomb's model).
- The Newcomb's model of communication was introduced by Theodore M Newcomb of the University of Michigan in 1953.
- In the model of interpersonal communication of Newcomb, the emphasis is given on the psyche and the relationship of the participants, which are influenced by the communication process.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.36

- ### Newcomb's Model (contd..)
- ❑ The Newcomb's model works in a **triangular** format or **A-B-X system**,
 A – Sender
 B – Receiver
 X – Matter of Concern
 - ❑ The relationship between A and B is like student and teacher, government and public or newspaper and readers. Sender and receiver may work in the same flow, but at the same time factor like "X" may affect their flow of relationship. "X" it may be third persons, issue, topic or policy.
 - ❑ He gives different approach to the communication process.
 - ❑ The main purpose of this model is to introduce the role of communication in a social relationship (society) and to maintain social equilibrium within the social system.
 - ❑ He does not include message as a separate entity in his model.
 - ❑ He concentrates on the social purpose of communication, showing all communication as a means of sustaining relationships between people.
- © Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.38

Newcomb's Model (contd..)

- ❖ A and B are communicating and X is the situation or the social context in which the communication is taking place. Both the individuals are directed both to each other and also to X. The balance between those three subjects is maintained by a constant information transmission. The communication process is perceived as the work of interdependent factors maintaining equilibrium.
- ❖ Theodore M. Newcomb based his work on the work of Heider, a psychologist, who was interested in the amount of consistence or inconsistency which can exist between two persons in relation to a third person or object. Where there is equilibrium (positive attitude among them or to the object), each participant is resistant do change. In situations where there is imbalance, efforts to gain balance occur. So a discrepancy between A and B and their orientation towards X actually stimulates their mutual communication
- ❖ Newcomb came out of this presupposition also, claiming, that communication is “a learnt answer in tension” and we are probably able to find more communication activities in conditions of insecurity and imbalance than in any other situation.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.40

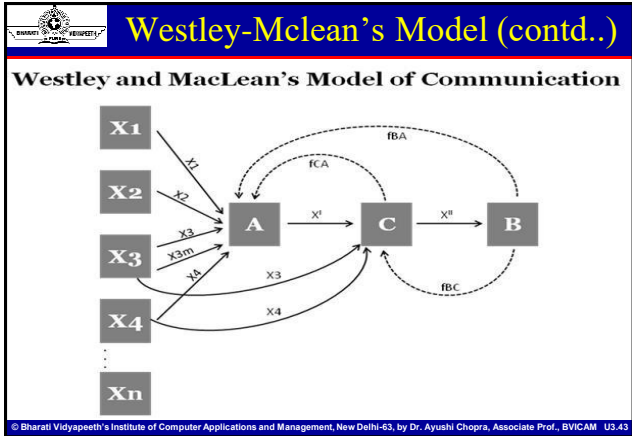

Westley-Mclean's Model

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.41

Westley-Mclean's Model

- Bruce Westley and Malcolm Maclean's introduced this model of communication.
- This model is an extension of Newcomb's model of communication and specifically adapted for the mass media.
- They have introduced a new element C, which is the process of deciding what and how to communicate.
- This model explains that messages in mass communication pass through different check points called 'gatekeeper' before they are actually received by the receiver.
- This model emphasizes the role of gatekeepers within the media organization.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.42

Westley-McLean's Model (contd..)

- **Source (A)** – Source is the message creator and sender.
- **Environment (X)** – Environment is the physical and psychological situation where the message is being created and sent; **sensory experience (X1...)**
 - – Sensory experience is the first thing that the source sees by which the source gets the idea for the formation of the message, example- news articles, information.
- **Message Interpretation or Coding (X')** – Message is interpreted with the objects of orientation of the receiver of the message.
- **Receiver (B)** – The person who gets the message sent by the source and the person who interprets according to his/her objects of orientation.
- **Feedback (f)** – The receiver forms another message after interpreting the message and sends it back to the sender. It is known as feedback.
- **Gatekeeper (C)** – Gatekeepers are found in mass communication. The gatekeeper is the editor who filters the message as per the needs of the audience and media institution.

Westley-McLean's Model (contd..)

- The Westley and MacLean's model can be applied in two contexts: Interpersonal and Mass Communication, the point of difference being the feedback. Feedback is direct and fast in interpersonal communication and indirect and slow in mass communication.
- The process of communication in Westley and MacLean's model of communication starts when the source creates a message from his/her environment. The communicator acts and creates the message as a response to the sensory experience with his/her own objects of orientation.

Westley-McLean's Model (contd..)

- Then, the response is coded after interpreting the environmental response. The coded message is transmitted to a second respondent who interprets the message differently according to his/her objects of orientation and provide feedback to the sender.
- Gatekeeper and opinion leader are the parts of communication process in mass communication. They are the editors, proof readers, etc. who choose which message should be published and what effect will it have on the audience.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.46

Example-

- Leading National daily newspaper, The Times of India receives press releases on behalf of client organisations. The newspaper publishes selected press releases. Further, the readers can directly respond to the client or indirectly through the newspaper for feedback. Here,
 - X1, X2, X3 ...are the press releases
 - F is feedback
 - A are the clients
 - B are the readers
 - C is The Times of India

Westley and MacLean's Model of Communication

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.47

Advantages

- There is the concept of feedback.
- As the message comes from the environment, sensory field improves the message formation.
- The model can be applied to interpersonal, group communication as well as mass communication.
- The model is very descriptive.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.48

Disadvantages

- There are **many variables**, even for simple communication which makes the model very complicated.
- The information can get modified while sending it from the sender to the receiver **as there can be noise**. The model **does not account for noise** in communication.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.49

George Gerbner's Model

- George Gerbner is considered as one of the **pioneers** of communication research.
- In 1956, he attempted the general purpose of communication model stressing upon the **dynamic nature of communication** along with the factors affecting **reliability of communication**.
- He proposed **two dimensions** in the communication process i.e., **perceptual dimension**; and **means and control dimension**.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.50

George Gerbner's Model (contd..)

Perceptual Dimension

- E - Event
- M - Message machine
- E1 - Perceived message by 'M'

Means and Controls Dimension

- S - Signal or Form
- C2 - Content created by 'M'

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.51

George Gerbner's Model (contd..)

- **Perpetual Dimension-** In this Dimension **E** is an event in real life and it is perceived by **M** man or machine. The event perceived by **M** becomes **E1** which is only a portion of the event because **M** has perceived it as according to his mood, attitude, culture etc. This is known as "Perceptual Dimension." There are three factors that involve between **M** and **E** in perceptual dimension, selection, context and availability.
- **M** selects interesting or required content from the entire event **E** and filters out the others. The event occurs in a certain context and its availability is based on **M**'s mood, attitude, culture and personality.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.52

George Gerbner's Model (contd..)

- **Means and Control Dimension-** In this dimension **E2** is the new event content drawn by **M**. Here **M** becomes the source to send the message about **E** to someone else. **M** creates signals or statements about the message **S** and Gerbner terms it as **SE2**. Here, **S** (form or signals) takes **E2** (**M**'s content). Further, **E2** is structured or formed by **M** and it can communicate in a number of ways or based on its structure.
- **M** has to use channels to communicate and the channels are more or less controlled by **M**. The question of control relates to **M**'s skill in using communication channels.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.53

George Gerbner's Model (contd..)

- This process can be extended to infinity by adding other receivers (**M2, M3...Mn**) who have further perceptions (**SE2, SE3...Sn**) of the statements about the perceived events.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.54

EXAMPLE-

- A journalist perceives a message from an event. She **cannot focus** on the entire event, thus filters out **excessive information** from the event. This filtered event is **not same** as the real event, it is just a representation of the entire event because the journalist **has edited the event based on his attitude, culture, personality or press policies**. S/he further disseminates the information, through newspapers, television, etc.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.55

ADVANTAGES

- The message is **structured and is not equivalent** to the original event.
- The model also focuses on-
 - ✓ How a message is created?
 - ✓ How a message is controlled?
- Gerbner's model has helped to make the communication process more **insightful** because it has added two **dimensions- perceptual**; and means and control dimension.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.56

AGENDA SETTING MODEL

- **Maxwell McComb and Donald Shaw** prepared a mass media model known as Agenda Setting Model in **1968**.
- The model put forward the idea that news media creates public agenda by **making people think things they want to show**.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.57

 **AGENDA SETTING MODEL (contd..)**

Assumptions of Agenda Setting Model

- Media distorts reality by **filtering and reshaping**.
- Media concentrating on **specific issues** and make people perceive that the issues are more important.

Levels of Agenda Setting

- Deciding what common subjects are important by using **objects and issues**.
- Deciding parts of subject which are **important** and how people should think about it.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.58

 **AGENDA SETTING MODEL (contd..)**

- “This impact of the mass media- the ability to effect cognitive change among individuals, to structure their thinking, has been labelled as the agenda-setting function of mass communication. Here may lie the most important effect of mass communication, its ability to mentally order and organize our world for us. In short, the mass media may not be successful in telling us what to think, but they are stunningly successful in telling us what to think about.”

–**McCombs and Shaw**

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.59

 **AGENDA SETTING MODEL (contd..)**

- Mass communication creates mass culture. Agenda setting is the ability of media to **determine prominence** of issues with news, through a **cognitive process** called “**accessibility**”, which is the process of retrieving an issue in the memory.
- The priorities of which news comes first and then the next are set **by the media according to how people think** and how much influence will it have among the audience.
- Agenda setting occurs through a cognitive process known as “**accessibility**”.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.60

Levels of Agenda Setting

- **First Level-** The first level is usually used by the **researchers** to study media uses and its **objectives or the influences** that media creates on people and the **most proximal thought** that **people** will have on the **exposure to the information** given by **media house**.
- **Second level-** At the second level, the **media focuses** on how people should think about the **nature of the issues**. Thus, **sensitisation of news reports** may happen to bring in the interest of the audience. In fact, media wants to grab attention and implant thoughts in people minds about some serious issues.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.61

Levels of Agenda Setting (contd..)

- Agenda setting model is used in **political ads, campaigns, business news, PR (public relation) etc.** The main concept associated with the model is **gatekeeping**. Gatekeeping is the in-charge and has control of the selection of content discussed in the media. It is assumed that the public cares mostly about the product of a media gatekeeping. Editors are the main gatekeepers of media itself. The news media decides '**what**' events to broadcast and show through the media '**gates**' on the basis of 'newsworthiness'.
- ✓ **EXAMPLE-** News comes from various sources, editors choose what should appear and what should not, hence they are called as gatekeepers.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.62

Levels of Agenda Setting (contd..)

- **Priming-** The responsibility of the media in proposing the **values and standards** through which the objects gain a **certain amount of attention** can be judged. The media gives **utmost importance** to a certain event such that it gives people the impression that that particular news is the most important one. This is done on a daily basis. The selected news report is carried on as a **heading or covered** regularly for months.
- ✓ **EXAMPLE-** Terms such as headlines, special news features, discussions, expert opinions are used. Media primes news by repeating the news and giving it more importance, for example, nuclear deal, elections.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.63

Levels of Agenda Setting (contd..)

- **Framing**- It is the process of **selective control**. It has two meanings, The way in which news content is typically **shaped and contextualized** within the same frame of reference.
- **Audience adopts** the frames of reference and to see the world in a **similar way**. This is how people attach importance to a **piece of news and perceive its context** within which an issue is viewed.

✓ **EXAMPLE**- During the Kargil War between India and Pakistan, in both the countries the news reports were framed in such a way that they show their own country in a positive light and the other in the negative.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.64

Factors Affecting Agenda Setting

- Gatekeepers, **editors and managers** and **other external influences**.
- Non-media sources like **government officials and influential personnel**.

✓ **For example**- If the media has close relationship with the elite society, that class will probably affect the media agenda and the public agenda in turn.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.65

Criticism

- Media users are **not ideal**. The people may not pay **attention to details**.
- The effect is **weakened for people** who have made up their mind.
- Media cannot create problems. They can only alter the level of **awareness, priorities, importance, etc.**

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.66

Spiral of Silence Model

- Spiral of silence model was first proposed by **Elisabeth Neumann** in 1984. She was a German **political scientist**, President of “**World Association for Public Opinion Research**” and one of the founders of “**Public Opinion Organization**”.
- The model talks about the **relationship between minority and majority** of people and how they **express themselves**. It proves **minority people keep silent** on their views on any particular subject.
- It was made for both, **politics and mass communication**.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.67

Spiral of Silence Model (contd..)

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.68

Spiral of Silence Model (contd..)

- Spiral of silence model is described in a diagram as a **spiral with two ends**. The top end of spiral is the **view of majority which is wide**. While, the lower end which consists of the **shallowest part are the views of minority**.
- According to the assumptions of the model, people through **intuition or awareness** know what the **majority thinks**. They do not **talk out loud** unless they know that their **views conform to majority**. If a person thinks that his/her **views are closer to that of the majority**, he/she express it more often and with more value.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.69

Spiral of Silence Model (contd..)

- On the other hand, people restrain themselves from telling it to others if they think the opinion of **majority is changing**. This might lead to change in their own **opinion as well**.
- **One of the main aspect** of this model is fear of **isolation and exclusion** of a group of people. This is seen in media, which is **mostly democratic** and run by the majority.
- So, it **advocates dominant** ideas and the majority view. Thus, minority does not **voice their opinion and has a tendency to remain silent**.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.70

Features

- It is a **dynamic process**.
- Mass media influences spiral of **silence phenomena**.
- Marginalization is a tool for **elimination of competition** in political, social and organizational scenarios.
- People are afraid to **speak out due to** their fear of **isolation**.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.71

Features (contd..)

- People can even **withdraw their opinions** to conform to group.
- A greater number of people can **reject others who don't conform to them**.
- Minorities **get less vocal space**.
- It is used in **both micro or macro levels**.
- The degree of openness depends on the view of **majority on the issues**.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.72

Assumptions

- Every individual has a **sixth sense** that makes them know the **prevailing majority public opinion**.
- Individuals have **fear of isolation** from a group of people. He/she could have **divergent or negative opinions** and might not support social status.
- People have fear of **reprisal**. This can cause more extreme **isolation or exclusion**.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.73

Criticism

- Individual personality differences **influences in people voicing their opinions are not considered**. **Over- confident people can speak anything they like even if they fall on the minority group**.
- Other aspects like a person's **political inactiveness and culture, prevents spiral of silence to work**, even if he is in minority.
- People's fear to be isolated from **their immediate small social circle**, like their family and friends, is more pronounced.
- People will find other group of people **who share similar opinions** if they want.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.74

Example

- ✓ In political elections, usually people are asked about their thoughts on probable candidates. They try to support the popular candidate confidently or do not give out their opinions.
- ✓ When a new rule is set in any organization, most of the employees do not complain. The minority who want to protest also can't do it due to the fear of isolation.

Relevance of Communication Models

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.76

Relevance Of Comm. Model

Models are often **heuristic stimulus**, i.e. they **crystallize new ideas and new ways of looking at things**. What this mean is that, communication models are **self-explanatory**. A researcher does not need an instructor **before he can understand what a particular model** is all about. Communication models give a researcher perspective by **exposing him to new ideas as well as, stimulating his thinking**.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.77

Relevance Of Comm. Model (contd..)

- Models **help make predictions** about the real world. Here, communication models not only describe the **ways of communication**, but they help explain the **"why"** in such a way that we can talk about the future. Models **do not only help in our day to day communication process, but because of the dynamic nature of communication, communication** models help us give explanations to some critical questions of the present that would address future's problems.
- Models help focus one's **attention on various aspects of the process**. By so doing, they allow the researcher to **visualize and analyse** separate part of the process.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.78

Relevance Of Comm. Model (contd..)

4. Models help explain a phenomena by providing in a **simplified way information** which otherwise be **complicated or ambiguous**. In other words, models can guide the researcher to **key points of a process or systems**.

5. Models can be used in practical ways to **analyse real problems and prevent the occurrence** of future problems.

© Bharati Vidyapeeth's Institute of Computer Applications and Management, New Delhi-63, by Dr. Ayushi Chopra, Associate Prof., BVICAM U3.79

Relevance Of Comm. Model (contd..)

6. Models also provide the means by which possible outcomes of **a research can be predicted**, as it is **possible to change the ordering or arrangement** of certain elements in a model in order to lest how such a **change can affect the process**.
