Abstract of the Talk	Vibe Coding challenges us to rethink programming as expression as well as logic in a world where code powers everything from art to finance. This session looks at how developers can embrace flow, intuition, and human-centered design instead of sticking to strict syntax. We'll learn how "vibe" can create more empathetic interfaces, cleaner architectures, and a closer bond between the coder and the creation, from algorithmic accuracy to aesthetic resonance. This talk will push you to feel the code rather than just write it, whether you're creating experiences or models. The session will also empower you to write complex code by harnessing the power of LLMs without having knowledge of multiple complex programming tech stack.

All are welcome:

Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. Advance registration is mandatory for participation. Participants will also get Participation Certificate.
