**Abstract of the
Talk**

Generative AI is like a horse; we need but ride on it. In this context, we have started Gen AI Series. In this session, we would discover how Generative AI is revolutionizing the future of healthcare and medical technology! This session covers transformative role of GenAI in Software as a Medical Device (SaMD) and broader healthcare applications. Explore real-world innovations—such as AI-powered diagnostics, automated clinical documentation, remote patient monitoring, and digital therapeutics—that are reshaping clinical workflows and improving patient outcome. Audience will gain insights into the regulatory frameworks (FDA, EU AI Act), and best practices for developing safe, effective, and compliant GenAI solutions. The session will also address key challenges, including data privacy, bias mitigation, and the importance of human oversight in AI-driven healthcare.

All are welcome:

Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
