Abstract of the Talk	*Communication technologies have evolved dramatically, from the telegraph to video conferencing, yet remote interaction remains inherently unnatural and often less effective than in-person contact. The ultimate vision of immersive communication is to create an experience so real that it eliminates the psychological distance between remote participants, making users feel truly "there". This presentation will cut through the hype to explore how specific industries can implement these technologies to enhance user engagement, improve training simulations, and facilitate seamless team interactions. We will discuss the practical applications of shared immersive environments in totality.*

All are welcome:
Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
