**Abstract of the Talk**

*This webinar explores the evolution of 6G as an AI-native ecosystem where intelligence is integrated directly into the physical and network layers. We will analyze how machine learning optimizes sub-THz communications and enables autonomous, "zero-touch" network management to achieve unprecedented data rates and ultra-low latency. The session also covers the synergy between sensing and communication (ISAC) to power next-generation applications like holographic telepresence and real-time digital twins. By examining these core pillars, participants will understand how AI transforms 6G into a pervasive, intelligent infrastructure.*

**All are welcome:**

Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
