**Abstract of the Talk**

*Generative AI is rapidly moving beyond standalone chatbots toward enterprise AI platforms that integrate multiple models, agents, and enterprise systems. LibraChat represents a new approach, enabling organizations to build secure AI assistants that combine multi-model support, reusable prompt libraries, agent-based workflows, and role-based access control. This session explores how engineers can design and integrate such platforms to create scalable AI-powered solutions. Participants will gain a clear understanding of the architecture, design patterns, and engineering practices used to build enterprise AI platforms and how these capabilities can be incorporated into modern software systems.*

**All are welcome:**

Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
