**Abstract of the
Talk**

Artificial Intelligence has rapidly moved from research labs into classrooms, workplaces, and everyday life. Yet much of the conversation around AI remains polarized between hype, fear, and unrealistic expectations. What is actually happening beneath the surface, and why do AI systems often appear more intelligent than they really are? This session looks under the hood of modern AI and AI agents, demystifying how they work, where they succeed, where they fail, and what their growing adoption means for students, researchers, educators, and professionals. Through real-world examples, emerging use cases, common misconceptions, and a practical look at the challenges ahead, participants will gain a clearer understanding of both the art of the possible and the art of the conversation in an AI-native world

All are welcome:

Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
