Abstract of the Talk

As organizations move from AI experimentation to enterprise-wide adoption, measuring business value has become as important as building AI solutions. This session introduces a practical AI Development Lifecycle (AIDLC) and explores how organizations can successfully adopt Generative AI and AI Coding Assistants to improve productivity, software quality, and delivery speed. Participants will learn frameworks for identifying high-value use cases, defining engineering and business KPIs, measuring productivity and Return on Investment (ROI), and implementing responsible AI governance. Through real-world examples and best practices, the session provides a roadmap for scalable, measurable, and sustainable enterprise AI adoption.

All are welcome:

Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
